

Research Week 7

What are 3 HTML elements not mentioned any of the video this week? What do they do and how are they used?

<Button> A button element is used to create a clickable button within your page so the user can click on the button and be brought to another page. The button element can have text added to it as well as tags if desired.

<Footer> The footer element defines the bottom of an HTML page. The footer is used to showcase other links the user can access within the page as well as highlight other details such as the copyright of the site or other related documents to the content shown.

<Video> The video element allows a developer to embed a video within their html page. This is used to showcase videos within a page to highlight key details or allow the user to access information in greater detail because of the video explanation.

Source site: W3Schools.com

Choose one of your favorite websites and identify 5 different HTML elements used on the website. Make sure to include the URL in your submission.

One of my favorite sites to use is <https://www.ebay.com/>

The 5 HTML elements I can see within the website are:

1. <Script>
2. <div>
3. <iframe>
4. <input>
5.
